

A F T E R G L O W
LASER POINTER PRESENTATION ASSIST SYSTEM

Transform your screen into a canvas.

Turn your presentation into a Show.

[HTTP://AFTERGLOW.BIZ](http://afterglow.biz)

Afterglow is the next-generation visual communications tool that allows you to interact directly with a projected image using a laser pointer. Have you ever wanted to write or draw directly on the projected image during a presentation to better illustrate a point? The Afterglow System makes this possible by transforming the laser pointer into a pen, brush, or mouse giving you the freedom to draw or write directly on the projected screen.

About the Afterglow System

Afterglow is a revolutionary system that creates an interactive environment with a laser pointer on a projection screen using a USB CCD based camera to determine the lasers position on the screen. The laser pointer can be used as a drawing tool to emphasize items on the screen and can also be used to control the cursor like a mouse. Afterglow also has built in slide controls for PowerPoint allowing the user to control their presentation using the laser pointer.

Afterglow can also used in the following ways:

- Afterglow can be used for large theater style presentations where the presentation is being projected on multiple displays. By using Afterglow, the laser pointers position can not only be seen on the main display but on all other displays making it easier for the audience to follow the presentation.
- Afterglow allows a laser pointer to be used during a Web Conference where the presentation material is being broadcast over the Internet. By using Afterglow, the position of the laser can be seen by the party on the other end of the conference.
- Afterglow can be used as an inexpensive telestrator system by projecting maps, photos, and other assets to be illustrated on TV.
- Afterglow can be used during tradeshow demonstrations. With built-in mouse controls, the presenter is able to control the demonstration while better engaging with the audience.
- Afterglow can be used to project and draw on the side of a building or any large semi-flat surface allowing it to be used for advertising or PR events.

System Includes:

- Afterglow Software CD with License for One Computer
- Green Laser Pointer 532nm <1mW Class 2 (Includes 2 AAA Batteries)
- USB CCD Camera with Removable Lens and Cover
- Tripod for Camera
- 6ft USB Cable

Minimum System Requirements:

- Intel Pentium III or Pentium M 1GHz class Processor
- Microsoft Windows XP SP1
- 256MB RAM (512MB Recommended)
- Graphics Card with External Output Resolution of XGA (1024x768)
- USB Port
- Projector with at least XGA (1024x768) Resolution
